

Hit the Road Jackpot – User Flow & Payment System Overview

This document outlines the full user flow and payment logic for the 'Hit the Road Jackpot' app, including all necessary details for smooth implementation and handoff to the development team.

1. User Flow

- 1. User opens the app and lands on the welcome/signup screen.
- 2. To proceed, the user must create an account and enter valid credit/debit card information. For this purpose we need the square platform.
- 3. Once the card is verified, users can access available games.
- 4. When a user selects a game and taps to start, a disclaimer modal appears (see details below).
- 5. If the user confirms the disclaimer, the game spinner becomes active.
- 6. Once the user spins, their card is instantly charged based on the game's rules.
- 7. The outcome is displayed immediately after the spin.
- 8. User can return to the dashboard, view their history, or join other games.

2. Disclaimer Popup

Before the user spins, a popup disclaimer must appear with the following message in a friendly tone:

 **Play Responsibly!**
Just a heads up — once you spin the wheel, your card will be instantly charged based on your pull. There are no refunds, so spin wisely and have fun!
By continuing, you agree to these terms.

Buttons:

- • 'Let's Play' (Proceeds to spinner and charges card)
- • 'Cancel' (Returns user to game selection)

3. Payment System

- • Credit/debit card must be entered and verified during signup.
- • Card info is securely stored via a third-party payment processor (e.g., Stripe).
- • Once the user spins the wheel, the system triggers an instant charge to the user's card.

- • Charge amount is based on the outcome or rules defined by the specific game.
- • No refunds are given once the spinner is activated.
- • All transactions should be logged for user access in the account history section.

4. Game Play Logic

- • Each game has a set number of available spots.
- • Users can select a spot and spin the wheel after agreeing to the disclaimer.
- • Once all spots are filled, the game is considered closed and the winner will be randomly selected.
- • All participants will be notified of the outcome via in-app notification and/or email.
- • Winning is based solely on random selection and is not influenced by order of entry or spend.
- • Each game must include clear rules and odds of winning, displayed before spin activation.
- • A 'No Purchase Necessary' (NPN) entry option must be provided for compliance – limited to one entry per game.
